

DATA QUALITY SOLUTION

# Take Control of Data Quality.

Visualize data quality, while monitoring and managing your data in real-time.

There's no such thing as perfect data. As business needs evolve so do data quality requirements.

While data quality is critical, it's also contextual. Data that's perfect in one use-case may be insufficient for another. Our fit-for-purpose Data Quality Solution enables users to specify broad-based and use-case specific data quality rules to rapidly and directly target their most critical data quality issues. Unlike expensive products, this lightweight, flexible solution attaches to existing data processes and pipelines, allowing you to quickly configure and visualize results.

Most often, data quality issues remain unknown until the data is actually applied, and by then, it's too late.

## THE BENEFITS

Identify data quality issues before it's too late. Monitor and manage data rules in real-time to ensure your data quality meets specific business needs.

### Monitor

Firewall determines fitness of incoming data on an ongoing basis, stopping bad data.

### Integrate

Automated authoring and execution of data quality tests on multiple databases.

### Configure

Data health dashboard with real-time data quality checks and dynamic data management.

### Manage

Add and refine data quality rules to filter and fine-tune data results.
